

From category to five timely topics.

A practical AI research workflow to help you find fresh LinkedIn post ideas across the web, then choose the one that feels right for your audience.

01	Choose a posting category Pick a subject you enjoy sharing about, such as product, design, leadership, careers, or your industry.
02	Scan the web Ask an AI research agent to look for recent developments, questions, and useful stories in your category.
03	Surface five topic ideas Request five distinct LinkedIn angles, each with a short explanation of why it is timely and links to supporting sources.
04	Check the sources Open the links, check dates and details, and set aside claims you cannot verify.
05	Choose your perspective Pick the topic that matters to your audience. Add your own experience, opinion, or useful takeaway.
06	Shape the post Ask AI to help outline or draft in your voice. Review every detail and publish only after you approve it.

A PROMPT TO GET STARTED

“Research recent developments across the web in [category] for LinkedIn. Find five distinct post topics likely to matter to [audience]. For each, explain why it is timely, suggest an angle, and include source links with publication dates. Prefer credible sources, do not invent facts, and ask me which topic I choose. Do not draft or publish until I approve.”

Keep this principle: AI agents can help you discover ideas quickly. You stay responsible for checking sources, adding your perspective, and choosing what to publish.
